## Objective

I am an IT enthusiast who reads for a bachelor's degree in Information Technology and seeking for an opportunity to start on my career in IT industry. My passion is to explore and gain insight into new technologies.  Working with teams of peers to address new challenges and learning from those is something I am looking forward in my career. I would love to prove my capabilities to your organization.

## Experience And Projects

- **Freelance Developer**
  (Part time)
  - Responsive website development and hosting for I and U tours as a freelance project (iandutours.com). Technologies such as JavaScript, Bootstrap, CSS, HTML were mainly used.
  - Commercial mobile app development in native android. The product tailored for calculations that uses for house architect planning. Technologies such as Java, XML were mainly used with Android Studio.

- **Undergraduate Research Project :**
  ( Final Year Bachelor of Information Technology )
  • Software Solution for an Advertising company  –
  - Developing as final individual research development project for my bachelors degree. Development is mainly using libraries and technologies such as Spring-boot, JavaEE, ThymeLeaf, Spring Security, Lombok, jQuery, Gradle, MySQL, JavaScript, HTML, CSS, Bootstrap.
  - This project consist of 18 major business modules that are for key functionalities of the client company. Also there are other comman modules to maintain company employees, maintain users accounts for employees and privilege management.

- **Other Project :**
  ( Personal development projects )
  • Rock Paper Scissor Game –
  Web based game that player can play against the computer developed and hosted with HTML, CSS and JavaScript (Testing version has hosted and running).
  • Blackjack Game –
  Blackjack Game that can play in web browser as a solo player.
  • User Management System –
  Web based project. Mysql was used as the database and PHP for backend.
